- (4) Only inward bank guarantees and eligible pledged investments and/or liquid funds are taken into account as credit risk mitigation. Inward guarantees are mainly received from CGD. Other forms of credit risk mitigation are non-qualifying collateral items in terms of the Regulations and are commented on below.

The Group uses on- and off-balance sheet netting to restrict its exposure to credit losses. When a client maintains both debit and credit balances with the Group and the Group enters into a netting agreement in respect of the relevant loans and deposits with the said counterparty, the Group may regard the exposure as a collateralised exposure in accordance with Regulation 23 of the Regulations. As at 31 December 2014, the Group did not recognise any netting arrangements to reduce its credit risk exposures for capital adequacy requirements.

Policies and processes for collateral valuation and management

Dependent upon the risk profile of the customer and their track record/payment history, and the risk inherent in the product offering, varying types and levels of security are taken to reduce credit-related risks. These include, inter alia, pledges of investments, mortgage and notarial bonds, guarantees and cession of debtors. Various levels of security value are attached to the different categories of security taken. The value of the security is reviewed regularly and the Group does not have any material concentration risk in respect of collateral used to reduce credit risk. Clean or unsecured lending will only be considered for financially strong borrowers.

3.6 Interest rate risk

Interest rate sensitivity analyses

For regulatory purposes, the assessment and measurement of interest rate risk is based on the accumulated impact of interest rate sensitive instruments resulting from a parallel movement of plus or minus 200 basis points on the yield curve.

In addition, the impact on equity and profit and loss resulting from a change in interest rates is calculated monthly based on management’s forecast of the most likely change in interest rates.

The table below reflects the Group’s annual net interest income sensitivity for a 200 basis point increase or decrease in interest rates, while all other variables remain constant. The impact is mainly attributable to the Group’s exposure to interest rates on its capital position and lending and deposits in the banking book.
